SUMMARY

Computer Science student at Khon Kaen University with practical experience in web development through an internship at Toyota Kaennakorn and a Teaching Assistant role. Proficient in PHP, Node.js, React, and MySQL, with hands-on experience building internal web applications and implementing backend systems. Seeking a programmer position with a long-term goal of growing into a Full-Stack Developer role.

WORK EXPERIENCE

Programmer/IT Intern — Toyota Kaennakorn

Apr 2025 - Jun 2025

- Developed and maintained internal PHP-based web applications based on user requirements and feedback.
- Improved the TKNCenter system by developing an admin dashboard and implementing role-based access control (RBAC).
- Developed HR-related features, including online assessments, DISC profile functions, employee survey forms, and financial survey forms using PHP.
- Improved a building maintenance request system by integrating LINE notifications for building technicians.
- Provided IT support for internal users, hardware, software, and system issues.
- Collaborated with users to gather requirements, test changes, resolve issues, and improve internal workflows.

Teaching Assistant — Khon Kaen University

Jun 2025 - March 2026

- Elements of Mobile Application Development (Year 4, Sem 2): Guided students through mobile app development, UI/UX wireframing, and frontend layout design
Elements of Mobile Application Development: Reviewed student project architectures and provided code reviews for debugging and troubleshooting
- Operating Systems and System Calls Programming (Year 4, Sem 1): Conducted lab sessions on Ubuntu covering process management, system calls, and memory allocation
Operating Systems: Assisted students in debugging C/C++ code and understanding kernel-user space interactions

PROJECT

Lifting Risk Assessment System (Senior Project)

- Developed a desktop ergonomics application for real-time manual lifting risk assessment from webcam and video input in industrial settings
- Built a hybrid AI pipeline combining MediaPipe Pose/Hands with a custom TensorFlow CNN for posture classification, lift-frequency detection, and automated LH Index calculation
- Implemented 4-level risk classification, uncertainty review workflow, role-based authentication (Admin/Assessor), and admin modules for factory/employee/camera management

EDUCATION

Bachelor of computer science
Khonkaen University

Aug 2022 - Apr 2026

ADDITIONAL INFORMATION

Technical Skills:

- Backend: PHP, Laravel, Python
- Frontend: React, Tailwind CSS, TypeScript, Node.js
- Database: MySQL, SQLite
- Tools: Git, LINE LIFF, Claude Code, Google Colab, XAMPP
- Other: AI Prompt
